EDUCATION

- Bachelor of IT

2020 - 2024

FPT University, HCMC

GPA 3.2/4.0 • 100% Scholarship

TOEIC 745
- High School for Gifted

2017 - 2020

Nguyen Du HS (Informatics), Dak Lak

AWARDS

- ICPC 2023 - Third Prize

Vietnam Southern Region
- Meta Hacker Cup 2025

Round 2 - Top 12% Global
- ICPC 2021 - Honorable Mention

Vietnam National
- National Excellent Student 2020

Informatics - Honorable Mention

FREELANCE

THULE

ThuleHT – E-commerce Platform

→ thuleht.com

2025 - Present

Go microservices for a cosmetics e-commerce platform.

• Built notification service over Zalo OA API and email — order updates, campaigns, and OA account verification

• Built product search on Elasticsearch with Vietnamese language analysis

• Shipped an MCP-based chatbot for customer inquiries and order tracking

Golang, Elasticsearch, Zalo OA API, Docker, PostgreSQL

H

Huynh Hanh – Management System

→ huynhhanh.com · github.com/huynhhanh-hms

2024 - Present

Java and Go microservices for agricultural operations.

• Built a Java storage service with a RAG pipeline for document search across operational records

• Built a Go land management service with geospatial handling for multi-site tracking

• Synced weighing-station hardware over Web Serial API with automated receipt generation

Java, Spring Boot, Golang, PostgreSQL, Docker, RAG

EXPERIENCE

- TMA Solutions – Backend Engineer

Apr 2024 - May 2026

→ Nokia Altiplano – Access Controller Team

Platform services for device orchestration and telemetry at scale.

• Built campaign orchestration for firmware upgrades across 5,000+ devices in 5 countries — dual-bank rollback, staggered rollout windows, and idempotent per-device state transitions over NETCONF/YANG

• Served as Build Police for a 14-engineer team across 5 countries — triaged Jenkins failures, isolated flaky Robot Framework tests, and kept merges unblocked

• Built windowed metric computation in the KPI engine — telemetry from thousands of devices on a 15-minute cycle, keyed by device ID across 8 Kafka partitions for ordering, feeding OpenTSDB and the alarm pipeline

Tech: Java, Spring Boot, Kafka, Kubernetes, Helm, Jenkins, MariaDB, Redis, OpenTSDB, ELK/OpenSearch, Prometheus, Grafana
- Agentic Vision – AI-Powered Security Platform

AI video monitoring layered onto a Java security platform, deployed on-premise for clients including Novaland.

• Built a Python/FastAPI streaming service with WebSocket for real-time monitoring of 100+ IP cameras, wired into the Spring Boot platform over Kafka for decoupled alerts

• Extended the Spring Boot alert engine with configurable trigger chains (1min → 5min, escalating severity) routing to mail and SMS

• Cut redundant OpenAI calls with token-aware prompting and Redis caching, trading inference cost against accuracy

Tech: Java, Spring Boot, Kafka, Python, FastAPI, WebSocket, Redis, OpenAI API, Docker
- ICON plc – Clinical Data Platform

Jan 2023 - Apr 2024

→ FPT Software – Software Engineer (Intern → Full-time)

Medical imaging software for ultrasound analysis, for international healthcare clients.

• Cut application startup time by 20% by offloading heavy I/O to background threads

• Restructured backend API response formats for high-throughput medical data delivery

Tech Stack: C++, C#, ASP.NET Core
