

3+ years building distributed systems across telecom, healthcare, and e-commerce. Production work in Java/Spring Boot, Kafka, and Kubernetes, with hands-on AI integration. Used to owning a service end to end - design, rollout, and the pipeline that keeps it green.

SKILLS

Core Expertise

JavaSpring BootKafkaMicroservicesDistributed Systems

Infra & Cloud

KubernetesAWS (Lambda, S3, DynamoDB)HelmDockerJenkinsRobot FrameworkPrometheusGrafana

Data & AI

PostgreSQLMariaDBRedisElasticsearchFastAPIOpenAI APIOn-premise GPU inference

Languages

PythonGoDart/FlutterTypeScript/ReactJs

Jiner Blog

EDUCATION

- Bachelor of IT

2020 - 2024

FPT University, HCMC

GPA 3.2/4.0 • 100% Scholarship

TOEIC 745
- High School for Gifted

2017 - 2020

Nguyen Du HS (Informatics), Dak Lak

AWARDS

- ICPC 2023 - Third Prize

Vietnam Southern Region
- Meta Hacker Cup 2025

Round 2 - Top 12% Global
- ICPC 2021 - Honorable Mention

Vietnam National
- National Excellent Student 2020

Informatics - Honorable Mention

EXPERIENCE

- TMA Solutions – Backend Engineer

Apr 2024 - May 2026

→ Nokia Altiplano – Access Controller Team

Platform services for device orchestration and telemetry at scale.

- Built campaign orchestration for firmware upgrades across 5,000+ devices in 5 countries - rollback to the last known-good image, staggered rollout windows, and idempotent per-device state transitions over NETCONF/YANG
 - Served as Build Police for a 14-engineer team across 3 countries - triaged Jenkins failures, isolated flaky Robot Framework tests, and kept merges unblocked
 - Built windowed metric computation in the KPI engine - telemetry from thousands of devices on a 15-minute cycle, keyed by device ID across 8 Kafka partitions for ordering, feeding OpenTSDB and the alarm pipeline

Tech: Java, Spring Boot, Kafka, Kubernetes, Helm, Jenkins, MariaDB, Redis, OpenTSDB, ELK/OpenSearch, Prometheus, Grafana

→ Agentic Vision – AI-Powered Security Platform

AI video monitoring layered onto a Java security platform, deployed on-premise for clients including Novaland.

- Built a Python/FastAPI streaming service with WebSocket for real-time monitoring of 100+ IP cameras, wired into the Spring Boot platform over Kafka for decoupled alerts
 - Extended the Spring Boot alert engine with configurable trigger chains (1min → 5min, escalating severity) routing to mail and SMS
 - Cut redundant OpenAI calls with token-aware prompting and Redis caching, trading inference cost against accuracy

Tech: Java, Spring Boot, Kafka, Python, FastAPI, WebSocket, Redis, OpenAI API, Docker

→ ICON plc – Clinical Data Platform

- Built serverless document services on AWS Lambda, S3, and DynamoDB - generating versioned history PDFs from clinical data forms and diffing each revision against the last
 - Triaged production defects through ServiceNow and traced recurring escapes to stale test coverage

Tech: Java, AWS Lambda, S3, DynamoDB
- FPT Software – Software Engineer

Aug 2023 - Apr 2024

Medical imaging software for ultrasound analysis, for international healthcare clients.

- Cut application startup time by 20% by offloading heavy I/O to background threads
 - Restructured backend API response formats for high-throughput medical data delivery

Tech: C++, C#, ASP.NET Core

FREELANCE

THULE

ThuleHT – E-commerce Platform

→ thuleht.com

2026 - Present

Cosmetics e-commerce platform with search, messaging, and chatbot.

- Built notification service over Zalo OA API and email — order updates, campaigns, and OA account verification
- Built product search on Elasticsearch with Vietnamese language analysis
- Shipped an MCP-based chatbot for customer inquiries and order tracking

Tech: Golang, Elasticsearch, Zalo OA API, Docker, PostgreSQL

Huynh Hanh – Management System

→ huynhhanh.com · github.com/huynhhanh-ms

2024 - Present

Multi-service platform for agricultural operations.

- Built a storage service with a RAG pipeline for document search across operational records
- Built a Go service for geospatial multi-site land tracking
- Synced weighing-station hardware over Web Serial API with automated receipt generation

Tech: Java, Python, FastAPI, Spring Boot, Golang, PostgreSQL, Docker, RAG
