

Nguyễn Mạnh Hùng

Backend Engineer

With 2+ years building scalable distributed systems across enterprise platforms. Specializing in Java/Spring Boot, Kafka, and Kubernetes, with hands-on AI integration experience.

SKILLS

Core Expertise	Java	Spring Boot	Kafka	Microservices	Distributed Systems	
Infrastructure	Kubernetes	Helm	Docker	Jenkins	Prometheus	Grafana
Data	PostgreSQL	MariaDB	Redis	Elasticsearch		
AI Integration	FastAPI	OpenAI API	On-premise GPU inference			
Languages	Java	Python	Go	Dart/Flutter	TypeScript/React/s/Angular/s

EDUCATION

- **Bachelor of IT** 2020 - 2024
FPT University, HCMC
GPA 3.2/4.0 • 100% Scholarship
- **High School for Gifted** 2017 - 2020
Nguyen Du HS (Informatics), Dak Lak

AWARDS

- **ICPC 2023 - Third Prize**
Vietnam Southern Region 🏆
- **Meta Hacker Cup 2025**
Round 2 - Top 12% Global 🏆
- **ICPC 2021 - Honorable Mention**
Vietnam National 🏆
- **National Excellent Student 2020**
Informatics - Honorable Mention 🏆

EXPERIENCE

- **TMA Solutions – Backend Engineer** Apr 2024 - Present
 - **Nokia Altiplano – Access Controller Team**
 - Implemented and maintained platform services within Nokia Altiplano, focusing on large-scale device orchestration and telemetry stream processing.
 - Worked within KPI engine domain - windowed metric computation across telemetry streams from thousands of devices, partitioning Kafka topics by device hostname for ordering guarantees and feeding periodic aggregated KPIs into OpenTSDB and the alarm pipeline
 - Built campaign orchestration service for firmware upgrades across 5,000+ telecom devices spanning 5 countries — publishing campaign lifecycle events to Kafka for cross-service coordination, implementing dual-bank rollback, staggered execution windows, and per-device idempotent state transitions over NETCONF/YANG to keep network availability during regional rollouts
 - Rotated as Build Police for 14+ engineer cross-regional team (Vietnam, India, China, Greece, Finland) - triaging Jenkins pipeline failures, isolating flaky Robot Framework tests, and routing infrastructure issues to DevOps to reduce developer-blocking failures and improve mean-time-to-merge.
 - Tech: Java, Spring Boot, Kafka, Kubernetes, Helm, Jenkins, MariaDB, Redis, OpenTSDB, ELK/OpenSearch, Prometheus, Grafana
- **Agentic Vision – AI-Powered Security Platform**
 - Integrated AI-powered video monitoring capabilities into existing Java enterprise security platform. Building Python inference layer and connecting it to the Spring Boot orchestration system via Kafka. Deployed on-premise for enterprise clients including Novaland.
 - Built Python/FastAPI streaming service with WebSocket for real-time 100+ IP camera monitoring, integrated into existing Spring Boot platform via Kafka for decoupled alert processing
 - Extended alert workflow engine in Spring Boot with configurable trigger chains (1min → 5min intervals, progressive severity) routing to mail/SMS recipients – enabling custom security response automation
 - Implemented token-aware prompt optimization for OpenAI API, balancing inference accuracy vs cost with Redis caching to cut redundant calls
 - Tech: Java, Spring Boot, Kafka, Python, FastAPI, WebSocket, Redis, OpenAI API, Docker
- **FPT Software – Software Engineer** Aug 2023 - Apr 2024
 - Developed medical imaging software for ultrasound analysis - performance optimization and API design for international healthcare clients.
 - Optimized imaging application by offloading heavy I/O to background, reducing startup time by 20%
 - Restructured backend API response formats for efficient high-throughput medical data delivery
 - Tech Stack: C++, C#, ASP.NET Core

📁 PROJECTS

ThuleHT – E-commerce Platform

2025 - Present

→ thuleht.com

Go microservices backend for cosmetics e-commerce platform with integrated search, messaging, and chatbot infrastructure.

- Built notification service with multi-channel delivery (Zalo OA API, email) – order updates, promotional messaging, and Zalo Official Account registration/verification
- Developed search service using Elasticsearch with Vietnamese language support for product discovery
- Implemented chatbot with MCP-based tool integration for automated customer inquiries and order tracking

Golang, Elasticsearch, Zalo OA API, Docker, PostgreSQL

Huynh Hanh – Management System

2024 - Present

→ huynhhanh.com · github.com/huynhhanh-ms

Multi-service platform for agricultural operations with Java and Go microservices backends.

- Built Java storage service with RAG pipeline for intelligent document search across operational records
- Developed Go land management service with geospatial data handling for multi-site property tracking
- Integrated hardware data sync via Web Serial API for weighing stations with automated receipt generation

Java, Spring Boot, Golang, PostgreSQL, Docker, RAG
