

NGUYEN MANH THUYEN

Backend Engineer

mailforwork.thuyen@gmail.com | 0849434447 | Go Vap, HCM City | [linkedin.com/in/thuyennnguyen26](https://www.linkedin.com/in/thuyennnguyen26)

PROFESSIONAL SUMMARY

Backend Engineer with 2+ years building scalable distributed systems using TypeScript and Golang. Proven track record in performance optimization (70% processing time reduction), cloud-native deployments, and AI-powered multi-agent systems.

WORK EXPERIENCE

OPLA CRM

September 2025 – Present

Full Stack Developer

Onsite

- Architected a distributed system of 8 services for ~10k users with **NestJS**, **TypeORM**, **PostgreSQL**, and **RabbitMQ** for async inter-service messaging. Designed RESTful APIs following **Clean Architecture** and **SOLID** principles.
- Optimized **Golang** export service handling **45k+** records with complex custom fields — reduced processing time by **70%** through batch splitting and parallel API calls, eliminating user-facing timeouts.
- Migrated frontend to **SSG** with route-based code splitting and lazy loading — improved **First Contentful Paint** by **50%**. Built UI with **React.js/Next.js**, **Shadcn UI**, and **Zod** for schema validation.
- Built an internal AI research assistant with 4 agents (CRM search, summarization, company analysis with chart generation) using **LangGraph**; chunked streaming with thinking mode via **FastAPI** and **WebSocket**.
- Designed GitOps pipeline: **GitHub Actions** builds images, **ArgoCD** auto-syncs dev/staging every 5 min and requires tag-based manual sync for production. Managed **K3s** via **Rancher** with **HPA**; used spot instances on dev/staging for cost savings.
- Built observability stack with **Prometheus**, **Grafana**, and **Loki**; dashboards tracking API failure rate, new user signups, and 24h error trends; configured **Microsoft Teams** webhook alerts on **75%** error threshold.

Tech stack: NestJS, TypeORM, PostgreSQL, RabbitMQ, FastAPI, Redis, LangGraph, LangChain, K3s, ArgoCD, Grafana

Cube System Vietnam

June 2023 – September 2025

Full Stack Developer (Intern → Full-time)

Onsite

- Developed serverless **Golang** backend (**Fiber**, **GORM**) on **AWS Lambda**/API Gateway with **Google SSO** and **JWT** auth; built **GitLab CI**/CD pipeline with **Docker**.
- Optimized database performance: **DynamoDB** query tuning with indexing strategies and **PostgreSQL** table **partitioning** on large datasets, reducing query execution time significantly.

Tech stack: Golang, AWS Lambda, DynamoDB, S3/CloudFront, GitLab CI, Docker, Nuxt.js

EDUCATION

Ho Chi Minh City University of Technology (Bach Khoa)

October 2020 – October 2024

Bachelor of Computer Science

- GPA: 3.2/4** | TOEIC: 690 (L&R), 215 (S&W)
- Graduation Thesis: Thesis Management System using **Golang (Fiber)**, **AWS S3**, **Google SSO**.

TECHNICAL SKILLS

Languages & Frameworks: Golang (Fiber, GORM), TypeScript/NestJS, Python/FastAPI, RabbitMQ, Celery

Database & Caching: PostgreSQL, DynamoDB, Redis

DevOps & Cloud: Docker, K3s, ArgoCD, GitHub Actions, GitLab CI, GCP, AWS (Lambda, S3)

AI & Practices: LangGraph, LangChain, Clean Architecture, SOLID, Prometheus, Grafana, Loki
